BUSINESS DECISION

11% improvement: UNVERIFIED

₹10 Cr recommendation: CONTROLLED PILOT

Break-even requirement: 1,010 additional paying accounts

Do not commit the full investment without controlled measurement.

EXECUTIVE INTERPRETATION

Recovery activity increased materially after the low-volume boundary period, but the final month also shows a substantial decline. Portfolio, cohort, selection, attribution-window, and denominator effects prevent the observed movement from being interpreted as a proven 11% recovery improvement.

Decision basis: descriptive evidence + forensic analysis + driver analysis + statistical investigation + counterfactual analysis.
